Name: _____ Date: ____ / ____ / _____

Each question gives a code in which letters stand for numbers, for example F=1, G=2, H=3, J=5, K=8. Work out the value of the calculation shown using these numbers, then choose the letter, A) to E), whose value matches your answer. Where a calculation has more than one step, use the order of operations: brackets first, then multiplication and division, then addition and subtraction. There is only one correct answer for each question.

Worked example. P=4, Q=7, R=2, S=9, T=5. Work out Q - R + P. Which letter has this value? **Answer: S.** Working left to right (only addition and subtraction are involved, so order does not change the result): Q - R + P = 7 - 2 + 4 = 9. Since S = 9, the letter S has this value, so S is correct.

1 Each letter stands for its place in the alphabet (A=1, B=2, C=3 and so on). Work out E x G - N. Which letter has this value?
