Name: _____ Date: ____ / ____ / _____

**In each question, two words are given in brackets, for example (BEDS) (AGE). Exactly one letter can be moved from the first word into the second word so that both of the resulting words are still correctly spelled, real English words. Work out which single letter must move, then choose it from the five lettered options. Study the worked example before you begin, then work through the questions in order.**

**Worked example.** (BEDS) (AGE) Exactly one letter can be moved from the end of the first word to the front of the second word so that both words made are still correctly spelled real words. Which letter moves? A) E B) D C) A D) G E) S **Answer: E.** Take the last letter off BEDS: removing S leaves BED, a real word. Add that same letter, S, to the front of AGE to make SAGE, a real word. So S is the letter that moves, which is option E. None of the other letters is the actual last letter of BEDS, so none of them can be the letter that moves.
